

Alu•Glide®

Aluminium Sectional Overhead Garage Door

Aluminium Framed Advantage The Alu•Glide® aluminium sectional overhead garage door provides the perfect alternative to compliment modern architecture. Part of the Gliderol designer door range the Alu•Glide® sectional overhead door can be manufactured to suit individual preferences. Each door is meticulously manufactured using strong aluminium extrusions, which are bolted together into sections. Each section is then hinged together to slide smoothly overhead in a steel track system. Aluminium framed doors are extremely strong, lightweight and corrosive resistant.

Residential or Commercial The Alu•Glide® is designed to cater for both residential and commercial applications. Typical commercial applications may be:- undercroft carparking requiring see-thru products, or applications which require free airflow.

Convenience of the press of a button Accompanied with an optional Glidermatic GTS 2000 sectional door operator, you will not need to leave your car as your Alu•Glide® rises smoothly and effortlessly at the press of a button guaranteeing your safety and convenience. When buying a Gliderol product, you can rest easy knowing that it is backed by an Australian company, that has been at the forefront in the design and manufacture of garage doors and operators for over 25 years.

Alu-Glide®

Aluminium Sectional Overhead Garage Door

Right: Alu•Glide® when clad with twin walled polycarbonate allows light to filter into your garage.

Unlimited Options

The Alu•Glide® sectional overhead garage door can be designed to accommodate a wide range of claddings.

Examples of such claddings may be:

- Twin walled polycarbonate sheeting in varying colours. Allowing valuable light to filter into the garage.
- Acrylic sheeting in various colours.
- Timber finishes (western red cedar, marine ply or similar)
- Colorbond® steel
- Stainless Steel
- Amplimesh® security grilles
- Optional window highlights may also be incorporated into your Alu•Glide® design.

Several options are available to the finish of the aluminium frame, which can be supplied in either aluminium mill finish, anodised aluminium, powder - coated or two pack painted

Right: At the simple press of a button your Alu•Glide® rises and descends effortlessly

Aluminium Sectional Overhead Garage Door

The Company reserves the right to make changes or improvements to the products or accessories without notice and without incurring any obligation to make similar changes or improvements to goods previously ordered.

Glidermatic GTS 2000® The opener for tilt and sectional garage doors.

Using technology smarter, we've combined the most up to the minute electronic circuitry, Australian engineering know how and streamlined design to create the Glidermatic GTS 2000®.

Its digitally coded sophisticated mini transmitter, and safe fully enclosed chain make it the most technically advanced door operator around. And when you buy a Gliderol product, it is backed by an Australian company that has been at the fore front in the design and manufacture of doors and electronic door opener systems for over 26 years.

Above: The sleek Glidermatic GTS 2000® Powerhead is unobtrusive and compliments your garage ceiling.

GTS safe We've taken safety one step further by enclosing the chain in a rollformed steel section. Now, all components of the system are safely housed within the cover. The low operating voltage is a safety feature in itself. Other safety features are the automatic reversing of the door when an obstacle is detected, an overload cut-out if the door is jammed, and immediate braking in case of power failure. All electrical components are fully contained in engineered flame retardant plastics. A timeout circuit is also incorporated to prevent motor burn out should the door be electrically functioned when in manual mode.

GTS quiet Simply speaking, The Gliderol GTS 2000® is as quiet as can be. The low voltage (24 volts) motor is rated at 150NM (1/3 hp) continuously rated. Your GTS operator incorporates a built in feature, which allows slow take off with ramp up speed to then slow at the end of travel ensuring no unnecessary strain on components and whisper quiet opening and closing.
